5. **Team member** : Gandikota Shivatmika
6. **Team member** : Sattarbeebe Shaik

## INTRODUCTION

### 6.1 Project Overview

The Automated Car Catalog System is a ServiceNow-based application developed to streamline showroom operations by digitizing and automating car catalog management. It facilitates efficient handling of inventory, automates customer inquiry processes, manages car model data, and tracks customer interest with real-time dashboards and alerts.

### 6.2 Purpose

The system aims to reduce manual errors, speed up customer service, and enhance operational clarity by offering real-time insights into available models, test-drive bookings, and stock levels through a centralized and automated solution.

## 7. IDEATION PHASE

### 7.1 Problem Statement

Car dealerships often manage large inventories with multiple models and customer interactions. Traditional systems are manual and prone to errors, leading to inefficient operations, delayed responses, and customer dissatisfaction. This project addresses these challenges by creating a

streamlined digital car catalog with automation for booking, inventory updates, and customer communication.

## 7.2 Empathy Map Canvas

User: Salesperson / Admin

Says: "I'm not sure if this model is in stock."

Thinks: "Managing requests manually is exhausting."

Does: Uses Excel and phone calls

Feels: Frustrated, Overloaded

## 7.3 Brainstorming Highlights

- Real-time availability of car models
- Automated notifications for low stock
- Test drive booking management
- Approval workflows for car assignments
- Inventory-level dashboards

# 3. REQUIREMENT ANALYSIS

## 3.1 Customer Journey Map

1. Inquiry: Customer requests a car model via portal
2. Approval: Admin confirms model availability and schedules viewing/test drive
3. Engagement: Customer visits showroom/test drives
4. Sale/Reserve: Vehicle is marked as reserved or sold
5. Stock Update: Inventory automatically updates

## 3.2      Solution      Requirements

Functional:

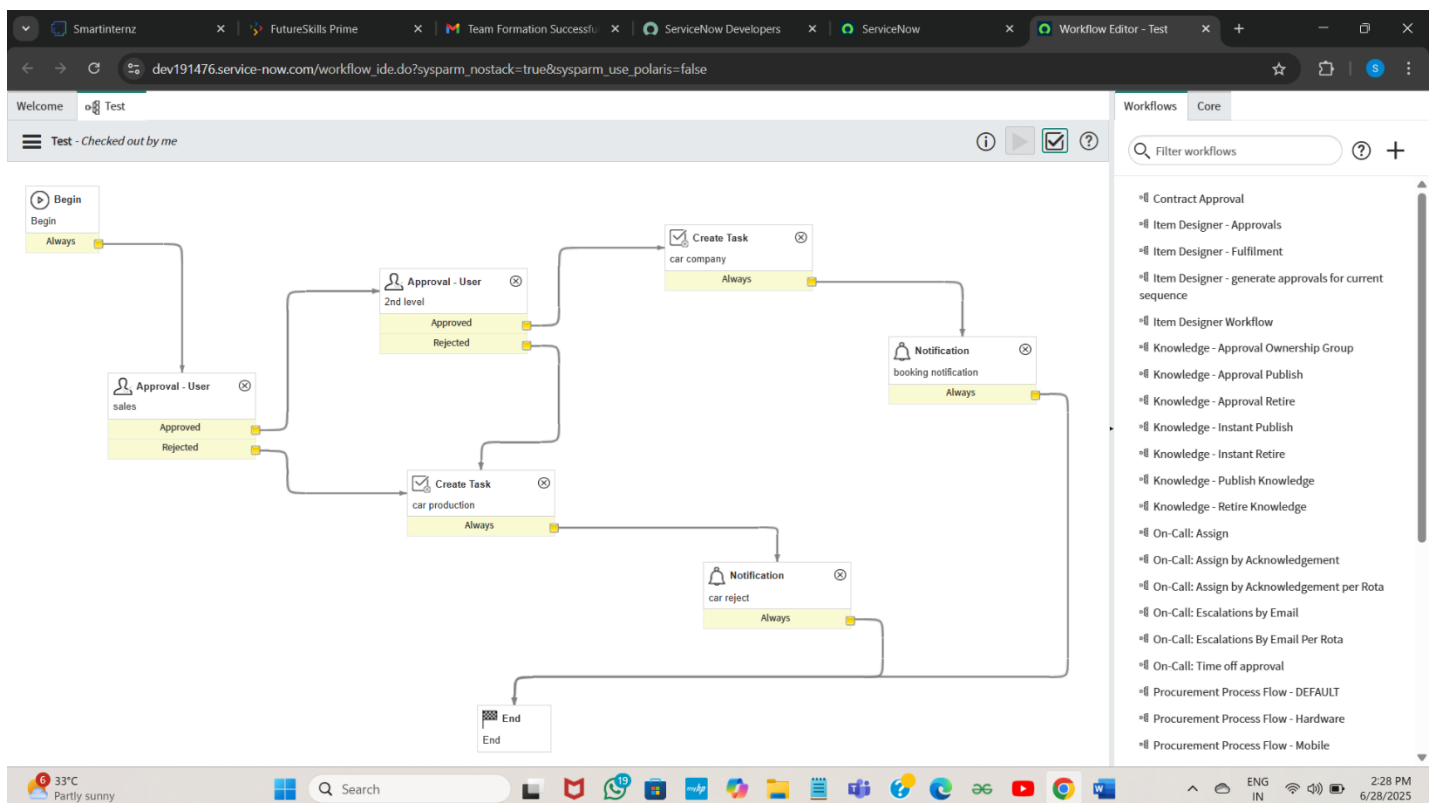

- Model search and filter
- Request/test drive workflows
- Real-time stock dashboard
- Email alerts for low availability

#### Non-Functional:

- Mobile-friendly UI
- Role-based access for Admin/Sales/Customer
- Minimal training required

### 3.3 Technology Stack

#### Work Flow:

- Platform: ServiceNow

- Scripting: JavaScript using GlideRecord & GlideDateTime
- Database: Custom tables for cars, customers, requests
- Reports: Real-time dashboards, pie/bar charts

## 4. PROJECT DESIGN

### 4.1 Problem-Solution Fit

Manual tracking of car inventory is slow, prone to human error, and lacks visibility. By leveraging ServiceNow's automation and scripting, this system digitizes car catalog management and enhances customer service delivery.

### 4.2 Proposed Solution

Key features include:

- UI Actions: "Book Test Drive," "Mark as Sold," "Mark as Reserved"
- Alerts: Email notifications for low stock and scheduled bookings
- Charts: Pie chart of model status (Available, Booked, Sold)

### 4.3 Solution Architecture

- Frontend: Custom ServiceNow portal forms for model viewing, booking
- Backend: Workflows for test drive approvals and car status changes
- Database: car\_inventory, customer\_requests tables
- Automation: Background jobs for reminders and availability alerts

## 5. PROJECT PLANNING & SCHEDULING

Planning | Week 1 | Define data structure, workflow requirements

Development | Week 2 | UI implementation, form creation

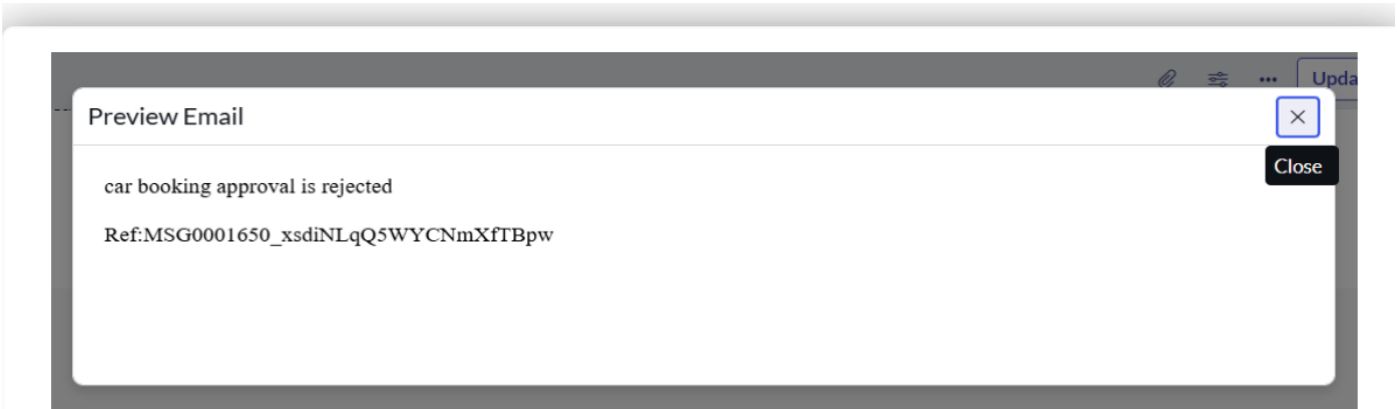

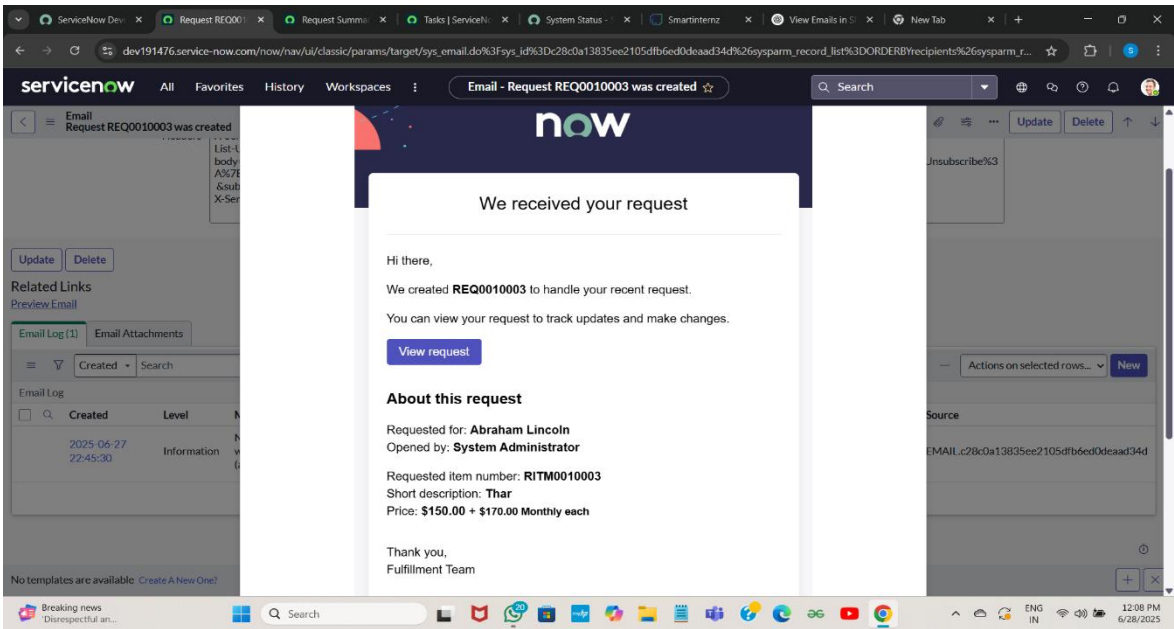

Testing | Week 3 | Automate workflows, email trigger setup

6. TESTING

6.1 Functional & Performance Testing

- Booking forms tested across roles
- Simulated low-stock models to trigger alerts
- Real-time dashboard updates verified

7. OUTPUT SNAPSHOTS

## 8. ADVANTAGES & DISADVANTAGES

### Advantages:

- Real-time catalog updates
- Easy customer handling via portal
- Automation reduces manual effort
- Scalable & customizable via ServiceNow

### Disadvantages:

- Requires ServiceNow license
- Backend scripting knowledge needed
- UI performance depends on form complexity

## 9. CONCLUSION

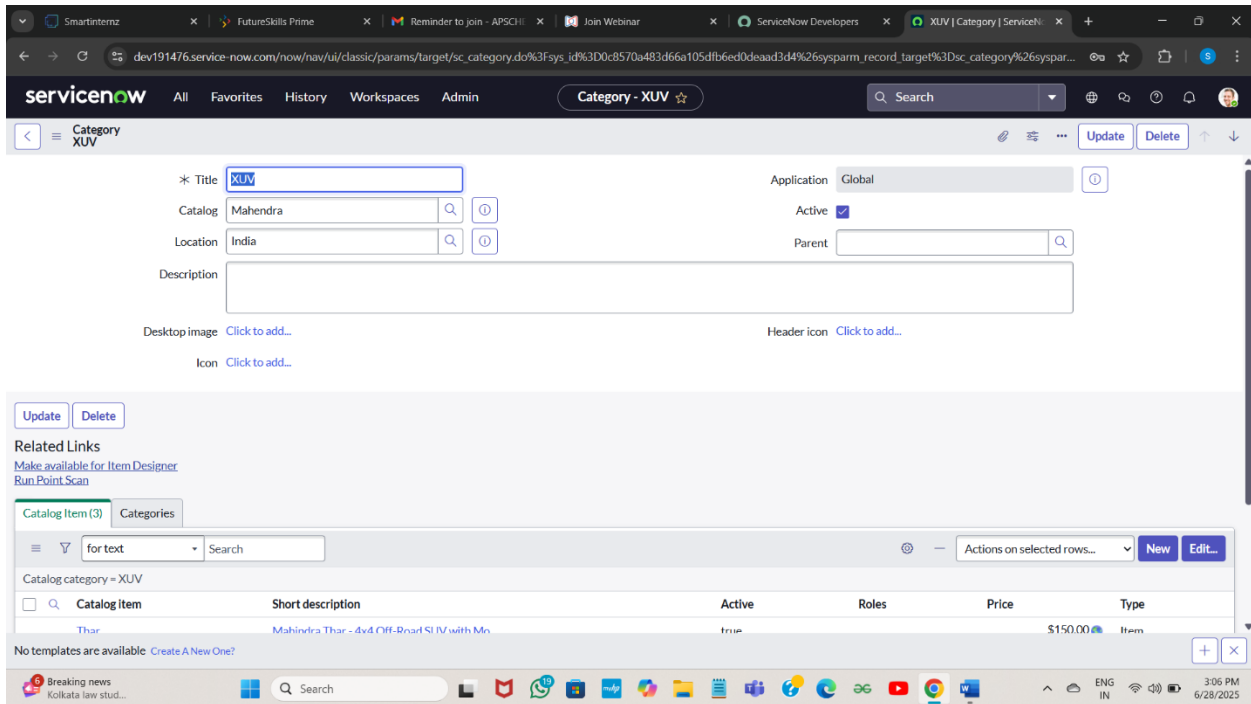

This ServiceNow-powered car catalog system offers a dynamic, automated, and customer-focused approach to showroom management. It streamlines inventory visibility, booking operations, and enhances user satisfaction through real-time data and smart workflows.

## 10. FUTURE SCOPE

- Barcode/QR integration for physical car IDs
- SMS/WhatsApp integration for booking confirmations
- AI-based model suggestions to customers
- Integration with payment systems for pre-bookings

# Process

## 1. Creating catalog

The screenshot shows the ServiceNow 'Catalog Item' form for a category named 'XUV'. The form is titled 'Category - XUV' and includes fields for Title, Catalog, Location, Description, Application, Active, and Parent. The 'Title' field is filled with 'XUV'. The 'Catalog' field is filled with 'Mahendra'. The 'Location' field is filled with 'India'. The 'Application' field is set to 'Global'. The 'Active' checkbox is checked. The 'Parent' field is empty. Below the form, there are buttons for 'Update' and 'Delete'. A 'Related Links' section contains links for 'Make available for Item Designer' and 'Run Point Scan'. A 'Catalog Item (3)' section shows a table with columns for 'Catalog Item', 'Short description', 'Active', 'Roles', 'Price', and 'Type'. The table contains one row with the value 'Mahindra Thar - 4x4 Off-Road SI IV with Mn' and a price of '\$150.00'. The 'Type' is 'Item'. The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 3:06 PM on 6/28/2025.

ServiceNow Catalog Item form for Category - XUV.

Fields and values:

- Title: XUV
- Catalog: Mahendra
- Location: India
- Description: (empty)
- Application: Global
- Active: ☒
- Parent: (empty)

Buttons: Update, Delete

- [Run Point Scan](#)

Table: Catalog Item (3)

Catalog Item	Short description	Active	Roles	Price	Type
Thar	Mahindra Thar - 4x4 Off-Road SI IV with Mn	true		\$150.00	Item

## 2. Creating Categories

This screenshot is identical to the one above, showing the ServiceNow 'Catalog Item' form for a category named 'XUV'. The form is titled 'Category - XUV' and includes fields for Title, Catalog, Location, Description, Application, Active, and Parent. The 'Title' field is filled with 'XUV'. The 'Catalog' field is filled with 'Mahendra'. The 'Location' field is filled with 'India'. The 'Application' field is set to 'Global'. The 'Active' checkbox is checked. The 'Parent' field is empty. Below the form, there are buttons for 'Update' and 'Delete'. A 'Related Links' section contains links for 'Make available for Item Designer' and 'Run Point Scan'. A 'Catalog Item (3)' section shows a table with columns for 'Catalog Item', 'Short description', 'Active', 'Roles', 'Price', and 'Type'. The table contains one row with the value 'Mahindra Thar - 4x4 Off-Road SI IV with Mn' and a price of '\$150.00'. The 'Type' is 'Item'. The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 3:06 PM on 6/28/2025.

ServiceNow Catalog Item form for Category - XUV.

Fields and values:

- Title: XUV
- Catalog: Mahendra
- Location: India
- Description: (empty)
- Application: Global
- Active: ☒
- Parent: (empty)

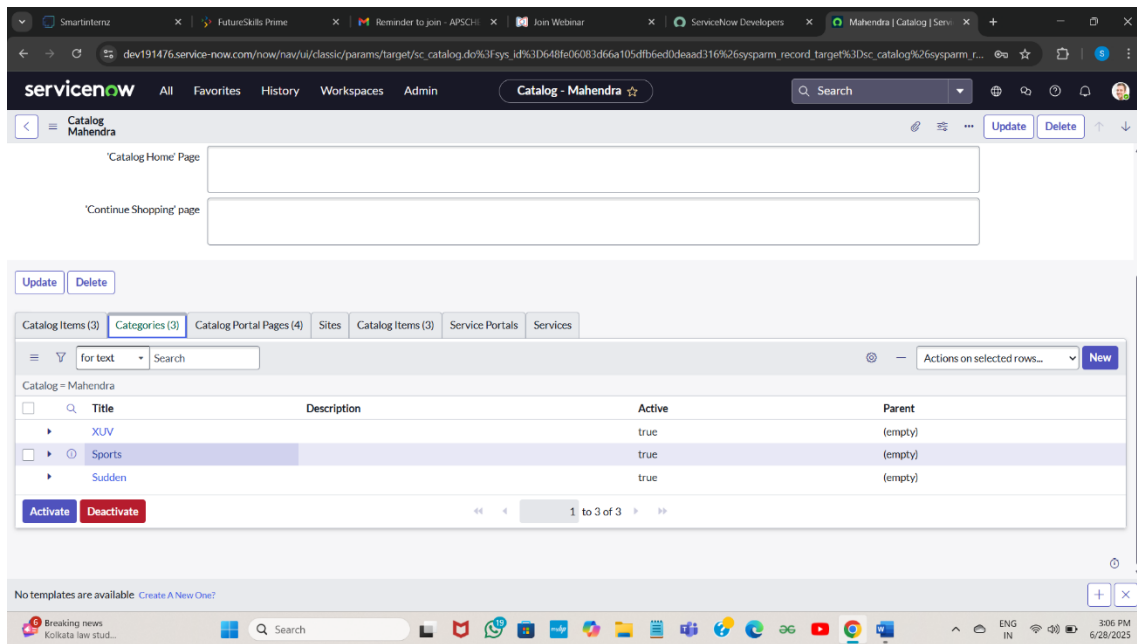

Buttons: Update, Delete

- [Run Point Scan](#)

Table: Catalog Item (3)

Catalog Item	Short description	Active	Roles	Price	Type
Thar	Mahindra Thar - 4x4 Off-Road SI IV with Mn	true		\$150.00	Item

### 3. User Creation

### 4.Role Creation

ServiceNow Role Configuration Page for 'emp1'.

**Role: emp1**

Name: emp1 Application: Global

Elevated privilege: ☐

Description:

Update Delete

Contains Roles Applications with Role Modules with Role Custom Tables

for text Search

Role = emp1

Contains

No records to display

No templates are available [Create A New One?](#)

## 5. Group Creation:

ServiceNow Group Configuration Page for 'showroom'.

**Group: showroom**

Name: showroom Group email:

Manager: Abraham Lincoln Parent:

Description:

Update Delete

Roles Group Members (3) Groups

User Search

Group = showroom

User
salesperson
sales person2
salesperson3

1 to 3 of 3

No templates are available [Create A New One?](#)

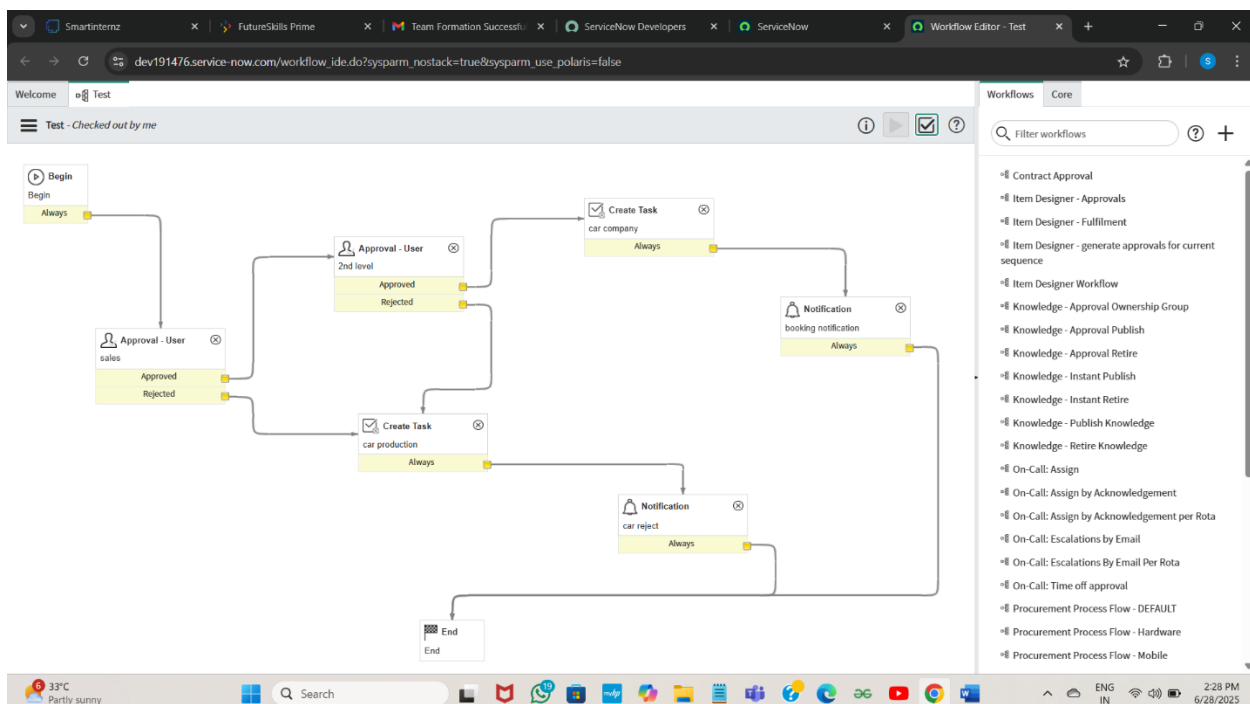

## 6. Table creation

The screenshot shows the ServiceNow 'Table - cars fulfillment' configuration page. The top section includes fields for Label ('cars fulfillment'), Name ('u\_cars\_fulfillment'), Extends table ('Task'), and New Choice ('-- None --'). The Application is set to 'Global'. Below this, the 'Columns' tab is active, showing a list of dictionary entries with columns: Column label, Type, Reference, Max length, Default value, and Display. The entries are:

Column label	Type	Reference	Max length	Default value	Display
Service	Reference	Service	32		false
Impact	Integer	(empty)	40	3	false
Group list	List	Group	4,000		false
Transfer reason	Integer	(empty)	40		false
Company	Reference	Company	32		false
Opened by	Reference	User	32	javascript:esentUserID()	false

At the bottom, a status bar shows 'No templates are available. Create A New One?' and a system tray with weather, search, and time information.

## Conclusion

The Car Catalog System project for a car showroom in ServiceNow successfully addresses the need for a streamlined, automated approach to managing car catalog items, customer requests, and approval workflows. By organizing car models into easily navigable categories and leveraging ServiceNow's powerful automation features, the system enhances operational efficiency, reduces manual intervention, and improves customer satisfaction.
